

Cleanwood®

Wood Protection Products

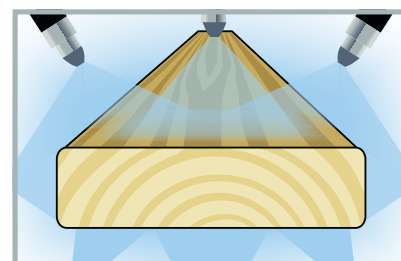

Protecting against mold and sapstain

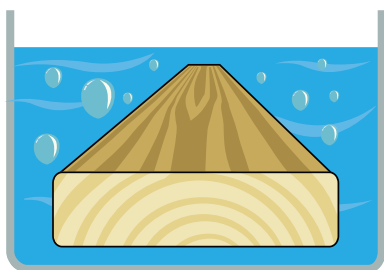

Cleanwood® Wood Protection Products provide the forest products industry with fungicides that prevent sapstain and mold.

Prosan® 18 (for Spray Application)

- Broad-spectrum fungicide for wood protection
- Controls sapstain and mold on freshly sawn softwood lumber, logs, poles, posts and timbers
- Applied by spray application
- Helps preserve the appearance and value of freshly sawn lumber products
- Synergistic combination of propiconazole and quaternary amine active ingredients

Busan® 1009 (for Dip Application)

- Controls fungi and iron tannate stain
- Controls sapstain and mold on freshly sawn softwood lumber, logs, poles, posts and timbers
- Applied by dip application
- Helps preserve the appearance and value of freshly sawn lumber products
- Combination of MBT and TCMTB fungicide active ingredients

Busperse 293*

** Use in combination with Busan 1009 to help maintain a clean, bright appearance on lumber products.*

Cleanwood® Wood Protection Products provide the forest products industry with fungicides that prevent sapstain and mold.

Without treatment, harmful insects, decay fungi, and marine borers can damage wood. In addition, infection by fungi can cause sapstain and mold. This can result in unsightly appearance and increased permeability that can lead to decay. Left to the elements, most wood possesses little decay resistance.

Cleanwood products are engineered to help treat and sustain the natural color, appearance, and brightness of softwood timber, logs, poles, posts, agricultural, landscape, and construction lumber.

Keep It Bright with Cleanwood!
